4/10/2014	SB1400245	3299 M ST NW	We will perform a total of two borings on the proposed site. The borings will each be extended to a depth of 10 feet below the existing slab on-grade utilizing a WildCat DCP and a hand-operated auger. Coring of the existing concrete slab on-grade will be performed to make access for the two borings. The hand auger will generate an approximate 4-inch annulus. Sampling will be conducted by obtaining the auger spoils and placing them in glass jars for geotechnical classification. After geotechnical exploration is completed, the borings will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. 4/29/2014	SB1400224	801 VIRGINIA AVE SE	To drill up to four soil borings to existing public parking lot and convert all borings into monitoring wells. The soil boring and monitoring well depth is 30 feet. The soil borings diameter 4.25 inches and the monitoring wells diameter 2.25 inches. Due to the shallow refusal encountered during Apex's 2011 SA, a hollow stem auger -HSA- drill rig will be utilized to install soil borings from ground surface to approximately 10 feet below the water table. Based on Apex's 2011 SA, the groundwater table is approximately 21 feet below ground surface -bgs-. Apex will complete a total of four four soil borings at various locations around the site -see attached Figure 1-. Upon completion of each boring, Apex will install monitoring wells to facilitate groundwater sample collection and evaluate groundwater elevations at the site. The wells will be constructed of two-inch diameter poly-vinyl chloride -pvc- screen and riser pipe, such that the screened interval brackets the groundwater table. A sand filter pack will be installed in the annular space around the screen, and two feet above the screened interval of the well. A minimum two-foot bentonite seal will be installed above the sand pack. The remaining annulus will be backfilled with cement grout to ground surface to prevent surface infiltration. The wells will be sealed with grout no later than 24 hours after well drilling completion. If construction activities halt before the well annulus is grouted, Apex will cover the wells and annular space to further protect from surface water drainage. Borehole caps will be constructed such that entry of contamination or other foreign materials, including surface runoff are prevented. Standard well construction materials -pipes, fitting, and other units- will be used in accordance with applicable sections of the D.C. plumbing code, American Society of Testing and Materials -astm- standards, or American Water Works Association -awwa- standards. A schematic illustrating monitoring well construction is attached as Figure 2. Soil cuttings from the borings will be treated as investigation derived wastes -IDW- and will be handled properly as described in Section 6.0., as per site plans, work plans report, DC Well Construction Application and DC Well Schematic Form.
