Subject: Solar on the Roofs!

My comment is simple:

Please start putting solar arrays on the tops of all public flat roofs of the US Government and DC government buildings in and around DC and throughout the DC Metro area.

There is so much opportunity for the Architect of the Capitol - and all government agencies - to go solar. The House Office buildings are a solar installer's dream. The vast parking lots could look like the Google campus parking lots, the main Library of Congress building is an enormous unobstructed flat roof, Union Station, the Folger, the Postal building - all of these are currently powered by the Capitol Power Plant and are great opportunities for solar.
