District of Columbia
Transportation Electrification Roadmap

Introduction to Mobility Equity

Webinar will begin shortly…
District of Columbia
Transportation Electrification Roadmap

Introduction to Mobility Equity

Wednesday, 17 March 2021
Welcome – Opening Remarks - Agenda

Agenda Outline

• Background: *DOEE’s Transportation Electrification Roadmap*
• Introduction to the Grantee: *the Electrification Coalition*
• Transportation Electrification Roadmap: Recapping January Orientation
  • Activities/Tasks
• Campaign Resources:
  • Electric Vehicles
  • Charging Infrastructure
• Introduction to Mobility Equity
  • EV Adoption Strategies
• Questions/Discussion
CLEAN ENERGY DC
THE DISTRICT OF COLUMBIA CLIMATE AND ENERGY PLAN

Transportation Electrification
Clean Energy DC is the District’s first quantified roadmap to meet the Sustainable DC climate and energy goals.

The plan will reduce emissions by 50% by 2032 compared to 2006 levels, and will help the city achieve carbon neutrality by 2050.
Overview of CEDC Act

The Act, effective as of March 2019, will realize CEDC goals by targeting three areas:

- **Transportation Emissions Reduction and Electrification** - mandates and incentivizes a path for zero-emissions fleets, buses and private vehicles

- **Renewable Energy** - mandates 100% renewable energy by 2032

- **Energy Efficiency** - Establishes a first-of-its kind Building Energy Performance Standard for buildings
TE Roadmap Goals

1. Buses and private fleets 50% Low or ZEV by 2030 → 100% ZEV by 2045
2. 100% EV replacement of public buses and school buses at EOL by 2021
3. At least 25% ZEV registrations by 2030 (estimates~75,000 EVs)

Provide policies, cost estimates, and timelines
Roadmap – Status

- Compared TE Roadmaps to determine best approach for DC
  - Looked at Pittsburgh, San Francisco, Fort Collins, Boston (proposal), Austin, NY, Columbus
- Awarded Grant to the Electrification Coalition
- Currently on track to present plan to the Mayor’s office beginning of next fiscal year.
- Convening a stakeholder engagement group to provide feedback

The Electrification Coalition

Who We Are

The Electrification Coalition (EC) is a nonpartisan, non-profit organization committed to promoting policies and actions that facilitate the deployment of electric vehicles on a mass scale, in order to combat economic and national security dangers caused by our dependence on oil.

- Technical Lead: Climate Mayors EV Purchasing Collaborative
- Electrification Advisor: Bloomberg American Climate Cities Challenge
- Freight Electrification Pilot Project: Hewlett Foundation
- Lead Electrification Partner: Smart Columbus
- Electrification Advisor: City of Atlanta Partnership
- Project Lead: Drive Electric Northern Colorado
- Project Lead: Rochester EV Accelerator
January 27 Orientation recap:

- View our previous webinar recording: *(shared in chat and after this webinar)*

- Outline of Roadmap workstreams in relation to goals; overview of work completed, work that remains, and how it will be achieved.

- Transportation Electrification Roadmap Final Report due **October 31, 2021**

  - Receive Stakeholder comments and redraft accordingly
Transportation Electrification Roadmap

- Strategies for increasing private sector investment in EVs and related infrastructure:
- Determine infrastructure needs and prioritize equitable placement within the District

<table>

**Projected EV Charging Need by 2030**  
*(Goal of 25% EVs Registered)*

*Curb side charging station development also be explored*
Transportation Electrification Roadmap

- Identify best practices for effective education and outreach
- Development of materials and recommendations for stakeholder engagement

Create a DC EV Consumer Adoption campaign and guidance

**EV Adoption Campaigns:**

- *Prioritizing diversity, equity, and inclusion in the electric transportation future*
- *Bus and fleet electrification*
- *Charging infrastructure at workplaces, public, private sites*
- *Dealership engagement*
- *Mobility solutions, like EV car sharing*
Transportation Electrification Roadmap

- Policy recommendations for Transportation Electrification

  Identify and compare equity indicators of policies and incentives for transportation electrification among various stakeholders

  **Prioritization factors:**
  - Increased access to high quality mobility options
  - Reduced air pollution
  - Increased access to economic opportunities in disadvantaged communities.

- Greenlining’s Urban Transportation Equity & Emissions Prioritization Strategy
Transportation Electrification Roadmap

- **EV Charging Policies and Incentives**
  - Charging opportunities for those that live in dense urban areas, in multi-unit dwellings (MUDs), and with no dedicated parking spot to charge.
  - Ensure access to charging infrastructure in historically disadvantaged communities.

- **District Bus Electrification**
  - Working with the Office of the State Superintendent of Education (OSSE) on a plan to transition the District’s school bus fleet.
  - Working with other District-based bus transit fleets.
EV Adoption - Vehicles

**ICE: Internal Combustion Engine**
Traditional automobile that uses liquid fuel (diesel, gasoline, etc.).

**PEV: Plug-in Electric Vehicle**

Battery Electric Vehicles, BEVs (all-Electric or ‘pure’ Electric Vehicles)
- Instead of an internal combustion engine, BEVs are powered by an electric motor and an on-board battery.
- No tailpipe, no emissions, more efficient, faster acceleration, quiet

Plug-in Hybrid Electric Vehicles (PHEVs)
- Have both an internal combustion engine and a small battery. Vehicle is powered from the battery until that is depleted, then switches to gas tank.
- Can be plugged into an electric power source to charge the battery.
EV Adoption - Vehicles

Why should I choose an electric car?

**No more gas stations**
You’ll never have to stop for gas ever again. Charge your car at home overnight just like your phone, or at work if your employer offers workplace charging.

**Top-of-the-line technology**
The electric car dashboard display shows your battery’s range, your current driving efficiency and navigation—all the must-have technology for today’s driver.

**A cheaper drive**
In the District of Columbia, electric car drivers pay $1.16 to drive the same distance as a gallon of gas in a conventional car. They’re cheaper to operate, with almost no maintenance costs. Just rotate your tires regularly and add fresh wiper fluid!

**Turn down the radio**
The next time you’re in a conventional car, take a listen. We’ve all gotten used to the engine noise as part of the driving experience—but electric cars are nearly silent at all speeds.

**Better Braking**
With regenerative braking, electric cars help you to brake, leaving you to enjoy better range and a smoother ride on city streets.

**Benefits for the economy and the environment**
Electric cars are oil-free, produce 85% less carbon emissions and no smog, and can be powered by renewable energy sources like solar and wind.
As of January 2021, there are nineteen (19) battery-electric vehicle models available to buy new in the US.

- Models of the Nissan Leaf, Mini Cooper SE, Hyundai Ioniq and Chevrolet Bolt all come in under $30,000.00

- At least 30 PHEVs available, many in the SUV class and eight (8) with MSRP under $30,000.00

EV Adoption – EV Charging Infrastructure

- The car and all cords and equipment must be clear of sidewalks and other public right-of-ways.

- Charging at Level 1 does not require any special equipment besides an outlet, but does require a **dedicated branch circuit**.

- Use only approved extension cords.
Introduction to Mobility Equity

**Mobility Equity:**
All people have access to transportation that serves their needs at an equitable cost (both in time and in money). Equitable transportation decisions therefore require meaningful community input.

Twelve (12) equity indicators have been chosen and categorized based on their ability to measure and advance the three goals:

1. Increasing access to high quality mobility options
2. Reducing air pollution
3. Increasing access to economic opportunities in low-income communities of color.
### Equity Indicators and Recommended Metrics

#### Goal #1: Increase Access to Mobility

1. **Affordability**
   - This metric will vary by transportation mode and location, and therefore should be set by the community; a recommended default is that households should spend no more than 20% of budgets on transportation costs.\(^{28}\)

2. **Accessibility**
   - Transportation mode is physically accessible (available in neighborhood), accessible to disabled people, accessible to people with various cultures/languages, accessible without the need for banking or a smartphone.

3. **Efficiency**
   - Frequency of transit, travel times, time spent in traffic, optimal availability of parking, etc.

4. **Reliability**
   - Consistency and variability of travel times, predictability of travel times.

5. **Safety**
   - Collision rate and severity;\(^{39}\) personal safety issues (harassment, profiling, etc.)
## Equity Indicators and Recommended Metrics

Achieved through sole focus on electrification

<table>

EV Adoption Strategies

Micromobility refers to shared bicycles and electric scooters (docked or dockless).

Car Sharing products allow consumers to rent a car, typically by the hour, to meet their transportation needs. Model may be station-based or free-floating. Bike/Scooter sharing follows this model.

Ride Sharing/Hailing allows users to share a ride with other passengers in a single vehicle. Passengers will be dropped off at their predetermined locations.
EV Adoption Strategies

**EV Group Buy Programs** boost EV sales by taking advantage of community-driven EV promotion and dealership discounts to raise consumer awareness and heighten interest. EV Group Buys allow community members access to electric vehicles at a pre-negotiated, discounted price—often in addition to Federal, state and local incentives.

2016 Colorado Example

2018 Massachusetts Example
## EV Adoption Strategies

### Current Federal and District-Specific Incentives

#### Federal
- **Vehicle:** Tax credit up to $7,500 is available for EV purchase
- **Infrastructure:** Tax credit up to $1,000 for the purchase of qualified residential fueling equipment to the end of 2021.

#### District
- **Reduced Registration Fees for High Efficiency Vehicles**
- **High Efficiency Vehicle Excise Tax Exemption**
- **Infrastructure Tax Credit:** 50% of the allowable costs for the purchase and installation of a charging station at a private residence, not to exceed $1,000 per station at a private residence.

#### Pepco
- **EV whole house time of use rate:** take advantage of lower rates by shifting home’s energy usage (including EV charging) to off-peak hours.
EV Adoption Strategies

**Workplace Charging**

- Workplace charging can provide a regular place to charge especially for residents who don't have access to home charging.
- Employees with access to workplace charging are six times more likely than the average worker to drive an EV.

To start a discussion about a workplace charging program:

- Inform your employer you'd like to have workplace charging.

**Resources for Employers**

- Step-by-step guide to create a workplace charging program
- Survey assessment about charging needs
- Sample policy for workplace charging
EV Adoption Strategies

**Equitable EVSE Placement**

While our work on equitable location of charging infrastructure is just beginning, we want to hear about community stakeholders about their concerns regarding EVSE development in their communities.
