Proposed Floodplain Regulation Updates
Why do we have them?

- Required for communities if they want the benefits of participating in the National Flood Insurance Program (NFIP)
- Protect life and property
- Protect the important environmental functions of floodplains
- DC has flood risk!
George Town
Potomac River
Eastern Branch
17th Street
Washington City Canal

From the entrance of this River up to the second Bridge, the depth of water is from 3 1/2 to 4 fathoms. The depth all along the shore where Wharves are marked.

Hurricane Sandy - 2012

- 90,000 buildings flooded
- 302,000 housing units in storm surge area
- $19 billion in total damages
- 117 fatalities
- Approximately 80,000 residents in 423 New York City Housing Authority buildings were affected by lost power, heat, and/or hot water as a result of the storm.

Why Update Now?

- FEMA requirements - Community Assistance Visit (CAV)
- 2017 Construction Codes - Appendix G
  - DCRA and DOEE must coordinate to ensure that development in a flood hazard area is compliant with the flood resistant construction provisions of the D.C. Construction Codes
- Prepare for the Future - Climate Ready DC
Coastal Flooding – High Tide
6.8 feet of SLR ~ NOAA Int – High Scenario 2100

10.8 feet of SLR ~ NOAA Extreme Scenario 2100

What would change?

- Terms
- Fees
- Flood Hazard Areas
- Design Flood Elevations
- Insurance Requirements
- Buffer Areas
- Critical Facilities

- No Adverse Impact
- Mixed Use
- Hazardous Materials
- Historic Structures
## What would change? – Regulated Areas

<table>
<thead>
<tr>
<th>Current Flood Hazard Rule:</th>
<th>Proposed Update:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Special Flood Hazard Areas</td>
<td>• Flood Hazard Areas</td>
</tr>
<tr>
<td>○ FEMA 100-year floodplain</td>
<td>○ FEMA 100- and 500-year floodplains</td>
</tr>
<tr>
<td>○ Only area regulated</td>
<td>○ Precedents in</td>
</tr>
<tr>
<td></td>
<td>Baltimore, Houston,</td>
</tr>
<tr>
<td></td>
<td>Austin, Charlotte, etc.</td>
</tr>
<tr>
<td></td>
<td>○ Areas removed from FEMA’s 100-year floodplain by</td>
</tr>
<tr>
<td></td>
<td>LOMR-F</td>

What would change? – Design Flood Elevation

**Current Flood Hazard Rule:**
All new and substantially improved buildings must be elevated or floodproofed to the:

- Base flood elevation (BFE) + 1.5 feet

**Proposed Update:**
All new and substantially improved buildings must be elevated or floodproofed to the:

- Base flood elevation + 2 feet
- or high flood elevation, whichever is higher
What would change? - Flood Insurance

Current Flood Hazard Rule:

- No insurance requirement
  - There is a FEMA mandatory flood insurance requirement within the 100-year floodplain for properties with federally backed loans, but that is enforced directly by banks.

Proposed Update:

- Proof of flood insurance
  - In flood hazard areas
    - Prior to final inspection & continuing for life of structure
  - Amount Required is lesser of:
    - The maximum amount available under the NFIP for the type of structure, or
    - The insurable value of the property minus the value of the land on which it is located.
What would change? – Buffer Areas

Current Flood Hazard Rule:
• No buffers

Proposed Update:
• Tidal Shoreline Buffer
  o Areas to be inundated by Sea Level Rise by 2100
  o New development must be protected to high flood + 6 ft. to account for NOAA predicted sea level rise.
  o Review by OP for harmony with surrounding urban design
• DC Parkland Buffer
  o DC parkland in 100-year floodplain upstream of backwater area
  o Prohibit new development, except park amenities
Tidal Shoreline Buffer Calculation

Mean Higher High Water (MHHW) in the year 2000: 2.2' NAVD88
+ Relative Sea Level Rise between the year 2000 and 2100: 6.4'
= Tidal Shoreline Buffer Elevation (MHHW in the year 2100): 8.6' NAVD88
6.8 feet of SLR (9 feet NAVD88)

What would change? – Critical Facilities

Current Flood Hazard Rule:
• Not addressed
• references ASCE design standard (ASCE 24)

Proposed Update:
• Critical Facilities defined
  o Flood Design Class 4 structures (ASCE 24)
  o Some Flood Design Class 3 structures (ASCE 24)
• Prohibit new or substantially improved critical facilities in flood hazard areas without variance or alternatives analysis and stringent protective measures
• HSEMA roles: review and approve evacuation and resilient power plans
Proposed Critical Facilities List

- **Hospitals** and health care facilities having surgery or emergency treatment facilities;

- **Jails**, correctional facilities, and detention facilities;

- **Care facilities** where residents have limited mobility or ability, including nursing homes but not including care facilities for five or fewer persons;

- **Housing** owned or operated by the DC Housing Authority;

- **Shelters** and short-term family housing facilities for individuals experiencing homelessness;

- **Elementary schools**, secondary schools, and buildings with college or adult education classrooms;

- **Preschool and child care facilities** not located in one-and two-family dwellings.

- **Fire, rescue, ambulance, and police stations** and emergency vehicle garages;

- **Designated emergency shelters**;

- **Designated emergency preparedness, communication, and operation centers** and other facilities required for emergency response;

- **Power generating stations** and other public utility facilities required in emergencies;

- **Critical aviation facilities** such as control towers, air traffic control centers, and hangars for aircraft used in emergency response;

- **Ancillary structures** such as communication towers, electrical substations, fuel or water storage tanks, or other structures necessary to allow continued functioning of a critical facility during and after an emergency.
Critical Facilities

This Dickinson, TX assisted living facility flooded during Hurricane Harvey was in the 100-year floodplain.
What would change? - No Adverse Impact

Current Flood Hazard Rule:
• Allows no increase in 100-year flood elevations in floodway
• Allows an increase in 100-year flood elevations up to 1-ft

Proposed Update:
• Allows no increase in 100-year flood elevations in floodway
• Allows no increase in 100-year or 500-year flood elevations on anyone else’s property.
What would change? – Hazardous Materials

Current Flood Hazard Rule:
• Existing provision has
  o one threshold (550 gallons)
  o List of 18 substances
• Not enforced

Proposed Update:
• Relies on several hazmat laws to identify relevant properties that have reporting requirements
• Requires a flood emergency action plan during any permit review
What would change? - Historic Structures

Current Flood Hazard Rule:
• Not addressed

Proposed Update:
• Requires coordinated review with SHPO
• Must show that flood proofing is achieved to the maximum extent practicable while still maintaining historic designation
What would change? - Mixed Use

Current Flood Hazard Rule:

• Not addressed
• Has been grey area for FEMA
• DCRA Administrative Bulletin in 2016 requires code modification if entire building not elevated above 100-year elevation
• DOEE has required use of 500-year floodproofing standard as condition of support for code modification

Proposed Update:

• Better define mixed use, residential use, non-residential use
• Lowest floor of residential portion must be above DFE
• Requires 500-year standard (for all buildings)
• Relieves burden of code modification if any non-residential floors are below DFE
Next Steps

• Gather informal feedback from multiple stakeholder groups
  • Please send comments by 4/17/2020

• DOEE to consider comments in refining draft rules

• DOEE to begin public rulemaking process, which includes:
  • Internal approval process
  • Publication of proposed rules in the DCMR
  • Consideration of public comments
  • Ultimately, finalization of rules
