

**Errata for the *E. coli* Bacteria Allocations and Daily Loads for Rock Creek  
established July 25, 2014**

The District Department of the Environment (DDOE) is providing errata for the *E. coli* Bacteria Allocations and Daily Loads for Rock Creek, which was established on July 25, 2014. The purpose of these errata is to correct Table 4 in the final Total Maximum Daily Load (TMDL) document. These errata will be considered part of the final TMDL.

Errata corrections to the TMDL report are included below.

***E. coli* Daily Loads**

During the public review period of the draft *E. coli* Bacteria Allocations and Daily Loads for Rock Creek, a commenter noted that maximum daily and average daily wasteload allocations (WLAs) for the combined sewer overflow (CSO) in the lower Rock Creek were incorrect due to a data processing error. After reviewing the comment and the data behind the WLAs, these incorrect values have been corrected as described in the Comment Response Document for the final bacteria TMDLs.

Table 4 is revised as follows:

**Table 1. Rock Creek daily loads (*E. coli*)**

Source		Upper	Lower
		<i>E. coli</i> (MPN)	
Upstream	Max	1.09E+12	3.43E+12
	Avg	7.35E+10	1.56E+11
Combined sewer overflow	Max	0.00E+00	<del>9.73E+13</del> 1.64E+14
	Avg	0.00E+00	<del>2.59E+12</del> 2.13E+13
Separate storm water	Max	2.92E+12	9.08E+11
	Avg	8.62E+10	3.45E+10
Direct (lateral) runoff	Max	8.39E+10	1.10E+12
	Avg	1.30E+10	1.70E+11
