

GOVERNMENT OF THE DISTRICT OF COLUMBIA
Department of Energy and Environment

TECHNICAL SUPPORT MEMORANDUM

TO: File

THROUGH: Stephen S. Ours, P.E.
Chief, Permitting Branch

FROM: John C. Nwoke
Environmental Engineer

**SUBJECT: Office of the Chief Administrative Officer
Permit No. 7338 to Construct and Operate a Non-Automotive Paint Spray
Booth at the Rayburn House Office Building, Washington, DC**

DATE: February 8, 2023

BACKGROUND INFORMATION

On August 26, 2022, the Air Quality Division (AQD) received an application from the Office of the Chief Administrative Officer (OCAO) to construct and operate a new stripping unit, SU-1, and a new non-automotive paint spray booth, SB-1, at the Rayburn House Office Building in Washington, DC. However, on December 7, 2022, Melissa Space, OCAO's Director of Safety & Personnel Security, through an email, withdrew the stripping unit portion of the application filing, opting instead to outsource the stripping activities (see the email of December 8, 2022). The stripping unit application was initially assigned permit number 7341 for tracking purposes, but with the withdrawal of the application, this permit number will not be used. Permit number 7338 was assigned to the non-automotive paint spray booth, which is what is being addressed in this permitting action.

The paint spray booth is to be used for non-automotive spray painting and other coating operations and will be located in the new Chief Administrative Officer Finishing Shop at the Rayburn House office building. The spray booth will apply a variety of coatings (i.e., lacquers, gloss, and stains) to office furniture used by U.S. House of Representatives as part of the Logistics & Support Business Unit's effort to upkeep and maintain furniture dedicated for use of congressional offices.

The application filing indicates that the paint spray booth is a new construction and when the equipment is procured it is expected to match the design specifications in the application.

It is unnecessary to attempt to determine whether the construction is new or existing for the reason stated above. Moreover, this facility is not subject to 40 CFR Part 63, Subpart HHHHHH (as will be discussed later) that requires such a determination.

CHAPTER 2 TECHNICAL MEMORANDUM

Office of the Chief Administrative Officer

Permit No. 7338 to Construct and Operate a Non-Automotive Paint Spray Booth at the Rayburn House Office Building

February 8, 2023

Page 2

The proposed permit action will be published in the DC Register on February 17, 2023. Public comments for the permit action will be solicited through March 20, 2023.

OCAO has not requested that any of the materials submitted with this application be held confidential.

TECHNICAL INFORMATION

The equipment covered by this permitting action includes one modified cross draft paint booth, SB-1, that uses two high-volume low pressure (HVLP) Aircoat spray guns, Wagner model 4700AC/GM4700AC-H. The spray guns have a maximum design coating capacity of 3.3 gallons (gal) of coating per hour and equipped with overspray filters for particulate matter (PM) control.

The operation involves surface coating equipment of furniture with paint and primer, and the application of lacquers, gloss and stains. There will be no use of methylene chloride (MeCl) at this facility.

The exhaust from the paint booth stack does not discharge vertically upward without obstruction. However, due to the location and the six foot above grade level stack exhaust point, it appears that compliance with regulatory requirements will be achieved. Moreover, the exhaust appears to be located such that it does not impede pedestrian activities (see Figures C-3 and C-5 of Appendix C of the application package.)

Emission estimates at the maximum spray gun application rate of 3.3 gal/hr is 2.7 tons per year of VOC, based on the use of a potential to emit (PTE) estimation technique specified in Section 5 of EPA's "Technical Support Document for Potential to Emit Guidance Memo. Documentation of Emission Calculations" [Tim Smith, USEPA/OAQPS, April 1998].

REGULATORY REVIEW

20 DCMR Chapter 2, Section 200: General Permit Requirements:

A non-automotive paint spray booth is an air pollution source because most materials used for this purpose, such as paints, coatings, adhesives, sealants, and solvents contain volatile organic compounds that are emitted during use and even when not in use. Thus, a Chapter 2 permit is required.

20 DCMR Chapter 2, Section 204: Non-attainment New Source Review:

The requirements of 20 DCMR 204 apply to the construction of any new major stationary source or any major modification at an existing major stationary source in an area designated as nonattainment under § 107(d)(1)(A)(i) of the CAA. As indicated by the applicant's emissions estimates, the project does not constitute the construction of a new major source or a major

February 8, 2023

Page 3

modification to an existing major stationary source. Therefore, the Project is not subject to the requirements of 20 DCMR 204. Therefore, no related requirements were placed in the permit.

20 DCMR Chapter 2, Section 209: Minor New Source Review

The requirements of 20 DCMR 209 apply to the construction of a new source or modification to an existing stationary source that increases the PTE of select pollutants by more than five (5) tons per year, on a unit-by-unit basis, and is not required to comply with the requirements of 20 DCMR 204.

The PTE evaluation in the application suggests that the unit-specific change in PTE due to the project is less than 5 tons/year and hence the project does not trigger the applicability of 20 DCMR 209. Specifically, the estimated aggregate VOC PTE from these unit is 2.7 tons/yr when accounting for the hourly and daily limits of 20 DCMR 700.2. Hazardous air pollutant (HAP) emissions would be lower. Therefore, the project is not subject to the requirements of 20 DCMR 209.9 and no related requirements were included in the permit.

20 DCMR Chapter 6, Section 606: Visible Emissions

The visible emissions limitations of 20 DCMR 606 are applicable to this facility. Proper operation of the equipment would preclude any visible emissions from being emitted into the outdoor atmosphere from the operation of the paint/spray booth and other equipment at the facility. This more stringent requirement (required by 20 DCMR 201) is contained in Condition II(c).

20 DCMR Chapter 7, Section 700: Miscellaneous Volatile Organic Compounds (VOCs)

The requirements of 20 DCMR 700.2 limits aggregate VOC emissions to less than 3 lb/hr and 15 lb/day for any emission units not subject to any other specific regulation under 20 DCMR Chapter 7. SB-1 has a VOC PTE greater than zero for emissions not subject to any other 20 DCMR Chapter 7 sections. The paint spray booth, as a result, is subject to the requirements of 20 DCMR 700.2

Appropriate monitoring, testing, and record keeping requirements have been included in the permit to ensure that compliance status with these requirements can be determined.

20 DCMR Chapter 7, Section 708: Non-photochemically Reactive Solvents

Section 708 requires that users of non-photochemically reactive solvents if not subject to other sections of Chapter 7 shall comply with 20 DCMR 708.2. The rule limits aggregate non-photochemically reactive solvent emissions to less than 8 lb/hr and 40 lb/day. This requirement was placed in Condition II(d) of the permit because OCAO indicated possible use of non-photochemically reactive solvents in conjunction with the operation of the paint spray booth.

CHAPTER 2 TECHNICAL MEMORANDUM

Office of the Chief Administrative Officer

Permit No. 7338 to Construct and Operate a Non-Automotive Paint Spray Booth at the Rayburn House Office Building

February 8, 2023

Page 4

20 DCMR Chapter 7, Sections 743 through 749: Adhesives and Sealants

These sections apply to the use of adhesives, sealants, adhesive primers, and sealant primers. The OCAO is likely to use these products, in small quantities, in conjunction with the paint spray booth operations and therefore is expected to comply with the applicable requirements of 20 DCMR 743 through 749 as included in Condition III(b) of this permit.

20 DCMR Chapter 7, Sections 764: Solvent Cleaning-Cold Cleaning

The requirements of 20 DCMR 764 apply to each cold cleaning machine that processes metal parts and contain more than one liter (1 L) of volatile organic compounds (VOC). The paint spray booth activity does not meet the definition of a "cold cleaning machine" pursuant to 20 DCMR 799. Therefore, paint spray booth, SB-1 is not subject to the requirements of 20 DCMR 764 and the permit does not include these requirements.

20 DCMR Chapter 7, Section 770: Miscellaneous Industrial Solvent Cleaning Operations

With some exceptions listed in 20 DCMR 770.9, this section applies to any person who:

- (a) Uses any industrial cleaning solvent in a solvent cleaning operation in or on the premises of a factory or a shop as part of a manufacturing, production, or repairing process where the facility emits at least fifteen pounds (15 lb.) of VOC emissions in any one (1) day from all solvent cleaning operations shall be subject to this section through § 770.10(a);
- (b) Sells, supplies, offers for sale, or manufactures any industrial cleaning solvent for use in the District of Columbia shall be subject to this section through § 770.10(a); or
- (c) Uses any industrial cleaning solvent in a solvent cleaning operation in or on the premises of a factory or a shop as part of a manufacturing, production, or repairing process where the facility emits less than fifteen pounds (15 lb.) of VOC emissions in any one (1) day from all solvent cleaning operations shall be subject to § 770.10(b).

Potentially relevant exceptions in 20 DCMR 770.9 are as follows:

1. Cleaning and surface preparation operations subject to Condition III(b);
2. Products used to strip cured inks, coatings, and adhesives;
3. Cleaning products used for janitorial purposes, including graffiti remover products;
4. Products used to clean resin, coating, ink, and adhesive mixing, molding, and application equipment; and

CHAPTER 2 TECHNICAL MEMORANDUM

Office of the Chief Administrative Officer

February 8, 2023

Page 5

5. Cleaning and surface preparation operations related to application of coatings subject to regulation under 20 DCMR 773 to 778 (AIM) to the extent the coatings are used as architectural and industrial maintenance coatings.

It is not expected that this applicant will use large amounts of solvents covered by this section, but it is possible that such solvents will be used. As such, Condition II(e) of the permit was added to limit emissions from such use to below 15 pounds per day, facility-wide. See Condition II(e) of the permit. Monitoring and record keeping requirements were added to Conditions IV(j) and V(c), respectively.

20 DCMR Chapter 7, Section 771: Miscellaneous Industrial Solvent Miscellaneous Cleaning and VOC Materials Handling Instructions

The requirements of 20 DCMR 771 apply to any person subject to 20 DCMR 770 as well as any person that uses any process that applies coatings, inks, or adhesives to flexible packaging where the facility emits less than fifteen pounds (15 lb.) of VOC emissions in any one (1) day before consideration of controls from all processes involved in applying coatings, inks, or adhesives to flexible packaging, including related clean-up activities. These criteria apply. As a result, the housekeeping requirements of 20 DCMR 771.3 are found in Condition III(h). Record keeping requirements have been included sufficient to show compliance with the requirements of 20 DCMR 771.4(a) and (b) in permit Condition V(c).

20 DCMR Chapter 7, Sections 773 through 778: Architectural and Maintenance Coatings

The requirements of these rules apply to "any person who supplies, sells, offers for sale, manufactures, applies, blends, repackages, or solicits the application of any architectural coating on or after January 1, 2005, within the District of Columbia, except as specified in 20 DCMR 775. The applicant states that the coatings that will be applied by SB-1 do not meet the definition of an "architectural coating" pursuant to 20 DCMR 799. Based on this assertion, no requirements were placed in the permit.

20 DCMR Chapter 9, Section 903: Odorous or Other Nuisance Air Pollutants

"An emission into the atmosphere of odorous or other air pollutants from any source in any quantity and of any characteristic, and duration which is, or is likely to be injurious to the public health or welfare, or which interferes with the reasonable enjoyment of life or property is prohibited [20 DCMR 903.1]" is applicable to all sources. This requirement is contained in Condition II(b) of the permit.

Federal Regulations:

Federal Regulations will be discussed however, those regulations that are not applicable will be briefly mentioned focusing only on the applicable regulations.

New Source Review (NSR) consists of two pre-construction permitting programs that address new sources or modifications to existing sources:

CHAPTER 2 TECHNICAL MEMORANDUM

Office of the Chief Administrative Officer

Permit No. 7338 to Construct and Operate a Non-Automotive Paint Spray Booth at the Rayburn House Office Building

February 8, 2023

Page 6

1. The Prevention of Significant Deterioration (PSD) program addresses projects in an attainment area (i.e., an area in which the air quality meets National Ambient Air Quality Standards (NAAQS) for a specific pollutant).
2. The non-attainment NSR (NNSR) program addresses projects in a non-attainment area (i.e., an area in which the air quality does not meet NAAQS for a specific pollutant).

Federal PSD regulations are established in the Code of Federal Regulations (CFR), Title 40, Section 52.21. District of Columbia NNSR regulations are established in the District of Columbia Municipal Regulations (DCMR), Title 20, Section 204. NSR applicability is based on the classification of the source under both the PSD and NNSR programs.

This facility's proposed construction is a new stationary source and not an existing stationary source based on the definition of 20 DCMR 199 under PSD and NNSR.

As indicated by the detailed potential to emit (PTE) calculations provided in the revision to the application, dated September 7, 2022, the Project has an unrestricted VOC PTE of 9.0 tons per year (ton/yr) and a negligible PM (including PM10 and PM2.5) PTE. These are well below the trigger thresholds for NNSR. In addition, the allowable VOC PTE of the project is still lower, at 2.7 ton/yr. As a result, the project is not subject to the requirements of PSD or NNSR.

40 CFR Part 60: New Source Performance Standards

The New Source Performance Standards (NSPS) are established by the Environmental Protection Agency (EPA) to limit emissions from new, modified, or reconstructed sources in applicable source categories. The requirements of these regulations are incorporated by reference in 20 DCMR 205.2. Specific subparts are discussed below.

40 CFR Part 60, Subpart EE - Standards of Performance for Surface Coating of Metal Furniture

The requirement of this regulation is codified in 40 CFR § 60.310 through 40 CFR § 60.316. Pursuant to 40 CFR § 60.310. This regulation applies to each "metal furniture surface coating operation in which organic coatings are applied" and construction, modification, or reconstruction occurs after November 28, 1980.

While the Project is primarily a wood-surface coating booth operation, and the SB-1 will apply organic coatings to wood furniture in the process, the applicant is required by the appropriate operational limitations, monitoring and testing, and record-keeping requirements of Condition III(j), Condition IV(h) and Condition V(b) of the permit to ensure that the requirements of Subpart EE are not triggered.

40 CFR Part 60, Subpart MM - Standards of Performance for Automobile and Light Duty Truck Surface Coating Operations. Pursuant to 40 CFR § 60.390, this regulation applies to affected facilities in automobile or light-duty truck assembly plant. The proposed equipment is a non-

CHAPTER 2 TECHNICAL MEMORANDUM

Permit No. 7338 to Construct and Operate a Non-Automotive Paint Spray Booth at the Rayburn House Office Building

February 8, 2023

Page 7

automotive paint spray booth operation and is not expected to apply coatings to vehicles. This regulation, codified in 40 CFR § 60.390 through 40 CFR § 60.398, applies to automotive paint spray booths and is not applicable to a non-automotive paint spray booth. Therefore, the project is not subject to the requirements of 40 CFR Part 60, Subpart MM, thus the requirements of this subpart are not included in the permit.

Other Non-Applicable NSPS Regulations:

40 CFR Part 60 includes several other performance standards that apply to coating operations- viz: Subpart RR -Pressure Sensitive Tape and Label Surface Coating; Subpart SS – Large Appliance Surface Coating, and Subpart TT- Metal Coil Surface Coating. The proposed project is not expected to include activities covered by these source categories. There are no compliance requirements in the permit covering Subparts RR, SS and TT.

40 CFR Part 63: National Emission Standards for Hazardous Air Pollutants (NESHAPs)

Title 20, Chapter 14 of District of Columbia Municipal Regulations adopts the National Emission Standards for Hazardous Air Pollutants (NESHAPs) by reference. The District regulations codify this reference in 20 DCMR 1409.1. The proposed project is not expected to emit hazardous air pollutants at rates exceeding the major source thresholds (10 tons/year or less of any HAPs or 25 tons/year of a combination of HAPs). The calculations in the Appendix A of the application filing indicates that the PTE for HAPs emission from the project is estimated at 2.7 tons/year.

In addition to those discussed in more detail below, 40 CFR Part 63 includes several other performance standards that apply to coating operations, Subparts II, III through NNN etc., but that would not apply to the proposed project because they do not apply to the types of operations proposed for this site. As a result the requirements in the subparts do not apply to this project and the permit has no such requirements either.

40 CFR Part 63, Subpart JJ -National Emission Standards for Wood Furniture Manufacturing Operations

This regulation, codified in 40 CFR § 63.800 through 40 CFR § 63.819, is applicable to a facility that is engaged in the manufacture of wood furniture or wood furniture components and that is located at a plant site that is a major source. The proposed paint spray booth operation is not located at a major source of HAPs. Therefore, this subpart does not apply, and no related requirements were placed in the permit.

40 CFR Part 63, Subpart MMMM - National Emission Standards for Hazardous Air Pollutants for Surface Coating of Miscellaneous Metal Parts and Products

This regulation, codified in 40 CFR § 63.3880 through 40 CFR § 63.3981, applies to activities located at a major source of HAPs. Additionally, pursuant to 40 CFR § 63.3881, the affected facilities described in 40 CFR § 63.3881(a) and (b) do not include the non-automotive paint

February 8, 2023

Page 8

booth operation covered by this project. Consequently, the project is not subject to the requirements of 40 CFR Part 63, Subpart Mmmm and related requirements were not included in the permit.

40 CFR Part 63, Subpart HHHHHH - National Emission Standards for Hazardous Air Pollutants: Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources

This regulation is codified in 40 CFR § 63.11169 through 40 CFR § 63.11180. Pursuant to 40 CFR § 63.11170, this regulation applies to a facility that is an area source of HAPs which performs one of the listed activities. The proposed project does not include any of the subject activities specified in 40 CFR § 63.11170(a) through(c). As such, the requirements of this regulation have not been included in the permit.

RECOMMENDATIONS

The application to construct and operate the paint spray booth facility and the attached permit to construct and operate comply with all applicable federal and District air pollution control laws and regulations.

Public comments for the permit action will be solicited from February 17, 2023 through March 17, 2023. AQD will resolve any comments received before taking any final action on the permit. If no adverse comments are received, I recommend that Permit No. 7338 be issued in accordance with 20 DCMR 200.2 promptly upon completion of the public comment period.

JCN
