

RiverSmart Rooftops: Structural Engineer Rebate Form

Adding a green roof to an existing building requires a Structural Engineer's assessment of load capacity to ensure a safe, successful outcome. To assist small property owners with this investigation, a cost share of up to two hundred fifty (\$ 250) dollars is available to eligible applicants. You are eligible if:

- The evaluated structure is under 2,500 square feet; and
- The project has an assigned registration number; and
- The assigned registration number is active; and
- The Structural Analysis is performed by Professional Engineer licensed in the District of Columbia; and
- Inadequate structural capacity found, green roof not installed; or
- Green roof is installed.

A rebate for this analysis is not available when adequate structural capacity is identified and the green roof project is not installed for other reasons.

For reimbursement submit the structural report, the service invoice and evidence of your payment with this form. Note, rebates cannot exceed the cost of the services.

File the Structural Engineer rebate payment request at any time, if inadequate structural capacity was identified and the property owner is no longer planning to install a green roof.

If the property owner is installing the green roof, file the Structural Engineer rebate with the request for final payment after the green roof installation is completed and program verified.
