### **Member since 2023**

Winner of the 2011 and 2020 District Sustainability Awards

## **Reported Environmental Activities**

### ✓ **Environmental Policy/Sustainability Mission Statement**

Bradley Site Design is a landscape architecture and urban design firm based in Washington DC and dedicated to the creation of vibrant, healthy spaces in every community. Recognizing the importance of social, economic and ecological equity and sustainability, we have created a unique design methodology that addresses this on every project. Starting in 2024, we are implementing our Design For Impact process, through which social, economic and ecological goals are identified in collaboration with our project communities, design responses are selected to accomplish those goals, and outcomes assessed.

### ✓ **Commit to Environmental Restoration and Community Environmental Projects**

In addition to our regular community environmental projects, we are celebrating 30 years in business by performing nine acts of service: three that will have economic impact, three with social impact and three with ecological impact. We will document the process and outcomes using our Design For Impact methodology. Examples of the activities we're planning are an Anacostia River cleanup with AWS, Casey Trees events and DCBIA's Community Improvement Day.

### ✓ **Composting**

Now that we are back in the office for most of each week, we are re-instituting our worm composting program. We are a small office and do not generate a large volume of compost, but what we do produce will be used for our balcony planters and gardens at home.

### ✓ **Stormwater Management**

We consistently exceed stormwater management requirements on our projects, designing bioretention facilities with 100% native plantings selected for their habitat support and educational opportunities. We added a civil engineering team to BSD to create coordinated, sustainable sites on all our projects.

Additionally, our many of our 2024 service projects will be focused on watershed stewardship.

✓ **Awards/Certificates**

We received DOEE's Sustainability Award in 2020 (and were the first landscape architects to receive it in 2011), and we continue the same practices that gained that recognition.

Other awards:

- -USGBC Maryland Leadership Award
- -DC Water Green Infrastructure Award (2)
- -Wintergreen Award (sustainable schools)

We are members of USGBC and consistently exceed the design standards necessary for LEED certifications on our projects.
